

School/District: _____

PERCEPTION DATA

Perceptions data are important for continuous improvement planning because they reveal what students, staff, and parents are thinking about the learning environment. Since humans cannot act different from what they value, believe, or perceive, it is important to know what each constituency is perceiving about the learning environment to assist with knowing what to change to create a learning environment that everyone perceives as helpful.

You may also choose to analyze your questionnaire results using strengths, challenges, and implications.
