Frequently Asked Questions:

When is the TIP due?

Phase I of the TIP is due by August 1, 2015.

What specifically is due August 1, 2015?

Using the Impact Document to guide your work by August 1, 2015, districts must turn in Phase I of their TIP. Phase I of the TIP should include the following:

- Data Analysis including what sources of data were used in the analysis and how the data was disaggregated to determine the focus for improvement;
- Infrastructure analysis including strengths and challenges within the system to support the focus for improvement;
- Focus for improvement including the specific student level outcome(s) that will lead to improved results for children with disabilities, baseline data and measurable targets to demonstrate improvement;
- Evidence-based strategies/activities including how the strategies/activities relate to general education initiatives

Why can't the district use MAPS, AIMSWeb, or DIBELS as their evidence-based strategy/activity?

MAPS, AIMSWeb, and DIBELS are screening and measurement tools that can be used to determine how students are progressing in reading and/or math skills prior to the statewide assessment. Although NDE supports the use of these assessments, they are not evidence-based strategies/activities that can be implemented to improve student performance. They can be used as a way to measure progress.

My district is working on MTSS. Does the district need to choose something else for the TIP or can we just focus on MTSS?

If a district is already implementing MTSS, you do not need to choose another evidence-based strategy/ activity. Simply inform us that the district will continue to use MTSS. The district may want to inform us of how they will be expanding upon what has already been implemented (such as increasing the fidelity of the strategy/activity, expanding the grade levels in which the strategy/activity is being used, etc.).

Are all districts required to implement MTSS?

No, all districts are not required to implement MTSS. Districts may choose any evidence-based, child centered strategy they feel will improve results for students with disabilities within their district.

How should the district submit the TIP?

The district may submit the TIP through the ILCD website or through ASSIST. Additional information regarding how to submit will be coming soon.

What is the difference between Phase I and Phase II of the TIP?

Phase I identifies the focus for improvement and the evidence-based, child centered strategies the district plans to implement to improve results for children with disabilities. Phase II provides the details of the strategy selected. For example, Phase I identifies the district will implement MTSS. Phase II identifies the specifics about how MTSS will look for the district including what training staff will need to be able to implement MTSS, who will provide training to the staff, what supports will be provided to staff, what indicators will be used to determine that MTSS is being implemented with fidelity, etc.

What is the difference between Phase I and Phase II of the TIP?

Phase II is the final step to the planning phase for the TIP. Phase III is the implementation of the plan and on-going evaluation of the district's progress toward meeting its identified goals.

What should a district do if they are farther ahead in the process than is specified?

Districts should continue their work towards improving outcomes for students with disabilities. If a district is ready for implementation during the 15-16 school year, they should work on implementing and evaluating their plan. The goal is for the dates to be seen as benchmarks.

What feedback will districts receive about their TIP?

Districts will receive comments to improve and strengthen their TIP as long as they identify an evidence-based, child centered strategy; otherwise, districts will be asked to revise their TIP.
