

PowerPoint Bar Charts Documentation

Purpose PowerPoint Bar Charts graphically describe survey results for every variable.

Example

Content Each chart describes:

- The weighted percentage (unless your data are unweighted) of students that reported each behavior overall and by sex, grade, and race/ethnicity. Results for subgroups with less than 100 students are not shown.
- The 95% confidence interval for each variable depicted with “I bars” above each bar (unless your data are unweighted).

Notes

Each Bar Chart corresponds to a Summary Table. Refer to the corresponding Summary Table to see more detailed results for each variable.

SUDAAN was used to calculate the confidence intervals and to test for statistical difference. Refer to “Sample Statistics Report Documentation” for more information about confidence intervals.

See [Software for Analysis of YRBS Data](#) on the [YRBS website](#) for more information about analyzing YRBS data.
