

THE NEBRASKA FOOD PROJECT

Origins | Options | Impacts is an educational experience for all FCS teachers no matter what grade level they teach. Keep in mind that this experience was not designed with food science in mind—however it does refer at times to the area.

NFP is about agricultural food production for human consumption. It has been designed to increase educator awareness of the Nebraska food industry; to discover career opportunities in food production; and to link education to economic prosperity.

We hope that by providing this direct experience through industry tours, direct contact with commodity groups etc., we will provide teachers with new information to use in their classrooms when teaching “foods”. It’s our goal through this project that students—through their teachers—will have a better understanding of the impact of agriculture on their lives, origins, options and impacts.
