THE POWER OF ROLE MODELS

A Collection of Native American Role Models

FIRST EDITION
SEPA Role Model Poster sets are available on their website. [http://www.unmc.edu/rhen/role_model_poster.htm](http://www.unmc.edu/rhen/role_model_poster.htm)

Science Education Partnership Award (SEPA) at the University of Nebraska Medical Center

Building Bridges: Health Science Education in Native American Communities is a national program funded by the National Center for Research Resources, an institute of the National Institutes of Health. This federal grant program (OD011071) is funded by a Science Education Partnership Award from National Institutes of Health. It is a partnership between the University of Nebraska Medical Center (UNMC), the Great Plains Tribal Chairmen’s Health Board (GPTCHB), and K-12 schools in Native American communities.

The objectives of the program are:
- To stimulate student interest in science
- To develop higher science/technology competency in the workforce
- To improve society’s science and health research literacy

The activities of the program are:
- Conduct summer workshops for teachers
- Develop hands-on science curriculum
- Implement professional development and mentorship for teachers
- Establish science camps for middle school students
- Provide science enrichment opportunities for high school students
- Participate in local health fairs and community events

Information about the Native American Role Model Poster sets is available on the web at: [http://www.unmc.edu/rhen/role_model_poster.htm](http://www.unmc.edu/rhen/role_model_poster.htm)

*Read about their occupations, their cities, their tribal information and visit the colleges they attended. Complete interactive guide.*
Role Models

Role Models will include tribal affiliation, home town, colleges, aspirations, job skills and special points of individual interest.
“Treat and care for people the way you would want to be treated. Enjoy all the ups, downs, and possibilities of the Alphabet. Even though it may be hard and long to get from A to Z, the most important thing is that you get to Z.”

Yvonne Bavari

Ogala Lakota Tribe
Nurse
Omaha, Nebraska

Education
B.S.N. Nebraska Methodist College Of Nursing
Omaha, Nebraska

Benefits
“I like my job because, not only do I meet new people, But I help them feel better. I also meet people from different cultures and beliefs; and that is rewarding in itself. It is great to incorporate the cultural beliefs with the spiritual, mental, physical and scientific care of people.”

Special Job Skills
“In my area of care there are requirements of basic life support, advance cardiac life support, spine and orthopedic care, and some human relations along with communication skills are needed.”

Motivation
“I first became interested in the health field when my grandmother (on my mother's side) became ill. I was in my last year of high school. Even though it took me awhile to establish myself into the nursing career/field I always had that feeling of wanting to know more about the body, brain, mind and spirit. And is there a better way than the health field to explore questions and feelings?”
“It is critical that students undertake a sound high school program in science and mathematics to prepare for complex and abstract physics studies in college.”

Dr. Fred Begay

Navajo
Physicist
Los Alamos, New Mexico

Education
B.S. Math and Science, University of New Mexico
M.S. Masters in Physics at University of New Mexico
Ph.D. Nuclear Physics at University of New Mexico

Dr. Begay was trained by the Bureau of Indian Affairs to become a farmer and never graduated from high school. He completed his high school in the Army. He has experience on NASA’s high-energy gamma ray project. Dr. Begay also derived a new electron temperature scaling law for laser-produced plasmas.

Life Acknowledgements

• Legacy and obituary
• NASA
• Council of Indian Nations
• Physics Central
• Careers in Physicists
• Founded SACNAS (Advancing Hispanics/Chicanos and Native Americans in Science?)
• Profiled in the 1979 Nova Film “The Long Walk of Fred Young

Awards
• American Indian Science and Engineering Society’s Ely Parker Award 1992
• National Science Foundation’s Lifetime Achievement Award 1994
• Distinguished Scientist Award from the Society for Advancement of Chicanos and Native Americans in Science 1999

Reasons why you like your job?
“I enjoy working on education and research projects. I was able to collaborate with national and international scientists. I enjoyed teaching and doing research.”

Special Job Skills
It is critical that skills in abstract reasoning be developed to effectively meet the challenges of studying physics.

How did you become interested in this career?
“I began my college career in mechanical engineering and changed my career to physics when I found answers to my questions about the laws of nature.”

Dr. Begay died in April of 2013, leaving a legacy so full of accomplishments. You are invited to read additional information about Dr. Begay at several websites.
“Be persistent and follow your passion on your educational journey. As you pursue your goals, always remember your Native identity and where you come from.”

Dr. LeManuel Lee Bitsóí

Education

B.S. University of New Mexico
Ed.M. Administration, Planning and Social Policy
Harvard University

2013 Update

Dr. Bitsóí is a research associate in the Department of Organismic and Evolutionary Biology at Harvard University. He also serves as an Education Strategy Consultant for the College Board.

Serves on the SACNAS board.

Member of the Diné Nation

Wal-mart Minority Student Success Initiative

Reasons why you like your job:

• My research in the ethical, legal, and social implications (ELSI) of genetic research has an impact on Native Americans and their communities.

• I assist in the recruitment of Native American students to study genome sciences.

• My job ties many different areas together, such as biology, sociology, anthropology, and law.

How did you become interested in this career?

“I was exposed to research opportunities in ESLI that was supported by the National Human Genome Research Institute of the NIH. After understanding that I could assist with bridging the gap between the scientific community and Native Americans in genetic/genomic research by serving as an ambassador, I began to work on different ways to improve understanding of the risks and benefits of genetic/genomic research.”

Special Job Skills

• Writing, communicating with others
• Reading and designing research for communities.
• Understanding of the biomedical sciences.
• Ability to advise and mentor students.

Speech at Leech Lake Tribal College, 2012. 15 minutes in length
“If you want to be a leader, you must get into the game. You cannot do it standing on the sidelines. Do not waste your time. Once you have made up your mind, do not waiver from that goal, no matter how difficult the challenge may be. Remember, you have been born because your Native people need you.”

Dr. George Blue Spruce, Jr.

**Education**

M.P.H. Masters of Public Health  
University of California Berkeley  

D.D.S. Creighton University School of Dentistry  
Omaha, Nebraska

**How did you become interested in this career?**

After having a painful experience with a visit to the dentist as a child, I thought to myself, “There surely is a way of performing this procedure without it having to hurt so much.” If I was a dentist, I would make every effort to make sure my patient would have a more comforting experience.” Later, as a teenager, a friendly, and kind dentist named Dr. Gaylord Rento inspired me to follow in his profession as a dentist. He gave me confidence and cheered me on during a bicycle derby in which I participated.

**Reasons why you like your job**

- I have been trained to heal sick gums, fix teeth, replace missing teeth, repair broken bones in the face and mouth. I like helping patients feel good about themselves by giving them a pretty set of teeth to display when they smile.
- I do not like to see people in pain. Being a dentist allows me to eliminate and treat pain so patients can feel good.
- I enjoy the company of others and being friendly.

**Special Job Skills**

- Good training in the various phases of dental treatment.
- Ability to interact and communicate effectively with people of all ages, ethnicity and financial backgrounds.
- Good organization and cleanliness.
- Being honest, friendly, warm, patient, understanding, caring, having a good sense of humor.

**Notable FIRST Indian Awards**

- American Indian graduate from dental school
- American Indian with a Master’s in Public Health
- American Indian to attain rank of Assistant Surgeon General
- American Indian to be assistant dean of a U.S. dental school
The George Blue Spruce Story

Watch the video and talk at Dr. Blue Spruce's book signing in 2010.
“Black Elk said that sometimes dreams are wiser than waking’...so dream until you’ve found your calling. Then, act and make that dream come true. Whatever is in your future, do not give up and remember that you need to return to your people first and help them out of the problems that plague them. There is a special place on this Earth for everyone, some just don’t know where that is yet.”

Dr. Anpo Wicahpi Charging Thunder

**Education**

B.A. Chadron State College  
M.D. University of Nebraska Medical Center, Omaha Nebraska

**Benefits**

- It’s gratifying to assist in the birth of a child, watch them grow, and help them become healthy, well-balanced adults...without having to yell, ground or scold them!
- Enjoy being respected, having ability to manage my own schedule, practice, and being able to positively affect my patients lives.
- Enjoy being a role model and being able to help my people become a strong, healthy nation once again...mentally, spiritually, physically.

**Special Job Skills**

“Compassion so you understand what your patients may feel: dedication so you don’t quit when the going gets tough; curiosity to motivate you to keep learning throughout your career: good communication, memory, comprehension and problem solving skills. Friendly (no one wants to see a doctor who doesn’t smile). Sense of humor (so you won’t get too upset), and a strong stomach!”

**Motivation**

“I saw the poor quality of care given to many people and believed that I could improve delivered care by making positive changes. I wanted a job where I could help people, be respected and be heard (since no one listens to me at home)!. And I needed a well paying job to support my six kids and fund my own programs to help the community.”

Ogala Lakota  
Physician (general)  
Omaha, Nebraska
“Accept the things you cannot change, courage to change the things you can, and the wisdom to know the difference.”  (Serenity Prayer)

Dale Chasing Hawk

Rosebud Lakota
School Psychologist
Parker, Arizona

Education
M.A.  Counseling, University of South Dakota
Ed.S.  Counseling University of South Dakota

Motivation
“I have always had an interest in counseling, so after my career at a major computer company ended, I chose to pursue my master's degree in the counseling field.  I enjoyed working with native youth and finishing my school psychology degree on the Colorado River Indian Tribe in Arizona.  I feel it is my obligation to help as many people as I can to the best of my ability.”

Benefits
• Working with native youth and their families.
• The positive affects you can make in a child’s life, watching change occur with the child.
• The variety of the experiences and people one comes across in the mental health field.

Special Job Skills
“A counselor should have patience, understanding, and empathy towards the clients they work with.  A counselor should not however feel sorry for their clients because that promotes the client as a victim, and all clients are survivors rather than victims.  All clients could grow and succeed if nurtured, much like a little tree can grow to be tall and sturdy if given care.”
“Start exploring different disciplines when you are young--be open not only to math and science, but to liberal arts, as all academic areas are required in any career. Also, start developing good study and test taking skills while you are in high school so that college will be easier.”

Dr. Otakuye Conroy

Ogala Lakota
Environmental Engineer
Tucson, Arizona

Education

B.A. University of Notre Dame
M.A. Environmental Engineering
University of Arizona
Ph.D. Chemistry, University of Arizona

Dr. Conroy is a newly appointed Assistant Professor in the Department of Civil and Environmental Engineering at the University of Utah. Her research interests include water and wastewater treatment and reuse, endocrine disruption, analytical and environmental chemistry, and metal resistance systems in bacteria.

Benefits

• New discoveries--I enjoy researching environmental topics not yet explored.
• It is challenging--I am challenged everyday, which drives my work.
• Relevance--water and air quality issues are a concern now more than ever.

Special Job Skills

“For me I have found that discipline and independence are necessary to complete a Ph.D. Environmental Science and Engineering requires a board background in biology, physics, chemistry, and math. Public speaking and presentation is also important since I have to relay information to various agencies.”

Motivation

“I have always been interested in academia and research-my goal is to become a professor at a major university. I love math and chemistry and had wonderful teachers in high school. In addition, I thought it would be important to choose a field that would be beneficial to my community. I would also like to mentor Native American students entering college.”

Other Information

Dr. Conroy has appeared in the movies Dances with Wolves and Miracle in the Wilderness. She enjoys fancy shawl dancing.

First Lakota to earn a doctorate in Environmental Engineering.
“Never consider failure as a setback in achieving an idea or goal. Use those experiences as an opportunity to learn and grow. The bottom line is to keep pushing forward and never give up.”

Dr. Chris Cornelius

**About Dr. Cornelius**

Dr. Cornelius is a member of the American Indian Science Engineering Society and the American Chemical Society Committee on Minority Affairs. He also is an adjunct professor of chemistry at Clemson University and chemical engineering at the University of New Mexico, teaching and mentoring Ph.D. students.

He is also an editor for the Journal of Materials Science quarterly series.

**Award and Recognition**

- Technical Excellence Award, 2006 National Conference American Indian Science and Engineering Society
- Granted four patents

**Benefits**

- Understanding and solving limitations by developing new materials, and studying their properties.
- Teaching and developing students into future professionals.
- Mentoring and importing experience to others.

**Motivation**

“While I was in college, I gravitated toward the sciences and discovered that I had an aptitude toward solving problems. When it came time to declare a major, I decided that chemical engineering was the best fit for me. The dream of becoming a college professor was something I always wanted to do. The challenge of continually learning and sharing this knowledge with others was something I knew I wanted to do with my career.”

**Special Job Skills**

Excellent verbal and written communication skills as well as people skills.

Strong understanding and being able to apply science and engineering.

Ability to simply complete problems and apply scientific and engineering principles in order to create solutions from abstract problems.
“Learn who you are and lead your life as a good relative. A good relative starts with yourself, then to the family, to the world and out into the entire universe.”

Glenn Drapeau

Yankton Sioux
High School Science Teacher
Marty, South Dakota

Education
B.A. Biology, Minor in Earth Science

2013 Update
Mr. Drapeau serves as Director of GEAR UP, a college prep program for tribal high school students.

Motivation
“I didn’t realize until later in life that I was taught the most important education, which was my own ihanktonwanwan, way of life. Through teaching, I can educate students in science, but also share the cultural teachings that will empower them as ihanktonwanwan, Dakota. These teachings will help them in life and their future careers.”

Special Job Skills
“A teacher definitely needs to have speaking skills and composure. They need to be able to address individuals with professionalism and confidence. They should also have a solid background in the area of science to be able to explain and teach others.”

Other Information
Mr. Drapeau is a lacrosse player and started the Lightning Sticks at his school. He is the lead for the Elk Soldier group which has been nominated for several awards in the Native American Powwow music genre. Read their Facebook page.
“As an architect, a business owner, mother, wife, sister, daughter, and friend, it’s hard to ‘to do everything.’ Focusing on what I’m doing at the moment rather than trying to constantly multi-task, helps me achieve the most out of my time. So try to live in the present--focus and concentration on the task at hand will lead to success in your efforts.”

Tammy Eagle Bull

Ogala Lakota
Architect
Lincoln, Nebraska

**Education**

- B.S.  Arizona State University
- M.Arch  Masters in Architecture  University of Minnesota-Twin Cities

Tammy is the President of Encompass Architects, P.C.
- Member Nebraska Chapter of American Institute of Architects
- Board member Nebraska Children’s and Families Foundation
- Formerly served on the Women’s Business Owner Network and Architectural Foundation of Nebraska boards.

**Special Job Skills**

Architecture is the combination of art and science. Being creative, as well as analytical is imperative. Strong math and science skills are necessary for the engineering aspects of designing, building and the construction process. Problem solving skills are also needed because there are always a variety of issues that need to be resolved.

**How did you become interested in this career?**

“I had a talent for drawing and enjoyed looking through books with my father. He helped me explore the possibility of becoming an architect. He loved the field of architecture, but was discouraged from pursing that career when he was in high school. With my father’s encouragement, by the time I was in the third grade, I knew I would be an architect and work with tribal communities someday.”

Pahin Sinte Owayawa (Porcupine School), Porcupine, SD (Pine Ridge Reservation)

Gila River Governance Center Lobby, Sacaton, AZ for the Gila River Indian Tribe

Legends Room, Shannon County School, Batesland, SD. Cultural classroom space used to highlight key tribal and community members and teach students about the Lakota culture.
“Be proud of who you are and don’t let anyone keep you from your goals.”

Yaqui
Scientist & Founder of Psychiatric Service Dog Society
Arlington, Virginia
“Respect your culture and always remember where you came from and the path that brought you to where you are today. Also, have respect for everything around you and treat others as you would like to be treated.”

Connie Giroux

Rosebud Sioux
Laboratory Supervisor
Rapid City, South Dakota

Education

B.S. Chemistry
South Dakota School of Mines and Technology

M.S. Technology Management, South Dakota Schools of Mines and Technology

Connie is the first Native American scientist at the Sanford Lab Underground Lab Mine Facility.

Works with the GEAR UP program.

Reasons Why You Like Your Job

I like my job because it allows me to participate in outreach activities with tribal organizations and provide a Native American perspective into the work that is conducted. My job also allows me to be involved with all aspects of science and to gain experience in various fields such as safety, constructions, and water treatment process.

How did you become interested in this career?

“I became interested in science and research when I was an undergraduate student studying chemistry and working in an inorganic chemistry research lab. While in graduate school, I became interested in project and safety management and gained experience as an intern at the NASA’s Jet Propulsion Laboratory in Pasadena, California. The experience and knowledge gained while in college enabled me to have a diverse background which ultimately led to my interest in this career.

Special Job Skills

• The ability to adapt to any situation and be a problem solver.

• It’s important to be a leader and a mentor to those you work with, but you should also be able to work in group settings.
“Try to remember life is a journey and you and only you determine the direction you want to go. Don’t depend on others to help you make a decision that is entirely up to you.”

Dr. Sven Haakanson

Education

- B.A. English, University of Alaska in Fairbanks
- M.A. Anthropology, Harvard University
- Ph.D. Anthropology, Harvard University

Haakanson’s research revolves around documenting and preserving the language and culture of the Aluit. He was executive director of the Alutiiq Museum.

Awards and Honors

- 2007 McArthur Foundation Fellowship for his work connecting Native people and museum Collections. (read the article)
- 2012 Governor’s Award for Distinguished Service to Humanities
- 2012 Guardians of Culture & Lifeways Leadership award from Association of Tribal Archives, Libraries and Museums.

Benefits

- It's home.
- I get to learn, share and promote my culture.
- I get to make a difference for our future now.

Special Job Skills

- Working with people
- Being able to listen

Sugpiat/Alutiiq Old Harbor
Anthropologist
Kodiak, Alaska

Dr. Haakanson being interviewed by National Geographic 2011
“Be curious about the world you live in, there is so much out there to learn.”

Dr. Scottie Henderson

Navajo
Marine Biologist
Norwalk, California

Education
B.S. Marine Biology
University of California, Santa Cruz
Ph.D. Zoology, University of Washington

Reasons why you like your job
• I get to be outdoors
• The animals I study teach me a lot.
• Animals can be very weird and very cool at the same time!

How did you become interested in this career?

“Like most kids in the 70’s I watched many nature shows, specifically Wild Kingdom and Jacques Cousteau of National Geographic. Also, my father was in the service. He was stationed in Hawaii and I got to go to the beach a lot.”

Special Job Skills
• You need to pay attention to detail.
• You need to have a sense of curiosity.
• Marine biologists work outside in all kinds of weather, rough terrain and long hours—so have much stamina.
“Believe in yourself and be confident you can achieve any goal that you wish to accomplish. Also, trust the people who believe in you when they recognize you have potential. I measure my success by the feelings of satisfaction I get from doing a good job. The harder the job, the greater the feeling of satisfaction!”

John B. Herrington

**Education**

- **B.S.** Applied Mathematics  
  **University of Colorado**
- **M.S.** Aeronautical Engineering  
  **U.S. Naval Postgraduate School, Monterey, California**

John carried a Chickasaw Nation flag on his eleven-day trip to space. His single space shuttle mission (STS 113) launched November 23, 2002, and landed December 7, 2002, traveling 5.7 million miles. Read about his mission.

**Benefits**

- Since I trained to fly in space, every day was different. Never a dull moment.

- I saw the earth from a perspective that few people every do.

- I get to share the experience with tens of thousands of people around the world.

**Motivation**

“I have been interested in aviation since I was about ten years old. My father was a pilot and an instructor and he gave me my first flying lesson. Around the same time, I used to dream about being an astronaut and going to the moon. It was not until my senior year in college when I actually pursued a career as a pilot in the Navy. During my tour as a Navy test pilot, I realized that my dream of becoming an astronaut was no longer just a dream, but something attainable.”

**Special Job Skills**

- The ability to think analytically and problem solve came from my background in applied mathematics and engineering.

- When combined with my skills as a Naval Aviator and test pilot, I had the right mix of academic and operational experience to be success as an astronaut.

November is National Native American Heritage Month. The first Native American astronaut, Cdr. John Herrington, is featured in this edition of DoDLive’s Profiles in Heritage.

First Native American Astronaut
“Young people need to always remember that they represent their community wherever they go. Take the time to go out into the world and develop yourself as a person.”

Colin Jones

Santee & Sisseton
Wahpeton Sioux
Agricultural Manager
Ashland, Nebraska

Education

A.A. Farm & Ranch Management
Northeast Community College
Norfolk, Nebraska

Colin is a Master Sergeant in the U.S. National Guard and assisted in Afghanistan with crop practices. He used his knowledge from farm and ranch management to help people learn to plant crops in foreign countries. His work helped people feed their families and provide an income for them by selling their excess produce or grain.

How did you become interested in this career?

“I initially became interested because of two main points:

1. Our family was very poor and paying for college would have been a struggle, and,

2. Long term employment on the reservation is very slim.”

Special Job Skills

The main skill is managing people and property. Also in my job, a person has to be a strong communicator.

Brief outline of Nebraska National Guard assisting Afghanistan crop production.
“You are never too young or old to change your path. If you don’t like the path before you, educate yourself and make a change.”

Myles Jones

Santee & Sisseton-Wahpeton Oyate
Chief Executive Officer, Indian Health Services
Lockport, New York

Education

B.A.E.  Biology and Physical Education
Wayne State College, Wayne, Nebraska

B.S.E.  Chemistry Education and Environmental Science
Northern State University
Aberdeen, South Dakota

M.P.H.  Masters in Public Health
University of Nebraska Medical Center
Omaha, Nebraska

About Mr. Jones

At one time, Mr. Jones was a teacher with Omaha Public Schools. He is the proud father of six children.

Three reasons why you like your job:

1. Challenges are there everyday and they are never the same.

2. I enjoy giving back to Native People for the blessings the Creator has given to me and my family.

3. It has always been a goal of mine to work for Indian Health Services.

How did you become interested in this profession?

My aunt was a physician in Indian Country and while there were many challenges, she always talked with a sense of pride about the job she did and the lives she was able to positively have an impact on. Additionally, my mom worked for years trying to make a positive affect Indian Country, so it is only right that I follow in their footsteps.

Special Job Skills

You need to be able to multitask, deal with crisis situations and people that may not want to hear what you have to say. You need to be willing to constantly educate yourself and those around you. Most importantly, you need a passion to assist others.
“Seek out what you want in life and what you want to do. Once you identify it, seek the initiative within you to complete the tasks for success.” Proverbs 3:5-6

Craig Lafferty

Rosebud Lakota
Radiology Technician
Rosebud, South Dakota

Education
B.S. Radiology Technology, Presentation College
Aberdeen, South Dakota

Benefits
• To have the opportunity to be directly involved with patient’s health care from the delivery of services to quality assurance.

• Being a part of the ever-changing technical advancements that allow me to visualize the human body in different dimensions with different modalities (CT, MRI, Nuclear Medicine).

Special Job Skills
• The ability to interact with all types of and ages of people. Communication is a big part of radiology. As a radiology technologist you need to have a full understanding of the patients’ health condition, so that you can use your technical skills to create the proper image that would assist the radiologist in making a diagnosis.

• Good critical thinking skills like the ability to handle stressful or traumatic situations that are outside the norm or textbook.

• The initiative to seek excellence in the services you provide by continuing education after becoming a radiology technologist.

Motivation
“One day my uncle Larry Dubray, (RT9R), PA-C, took the time to introduce me to the field of radiology through textbooks and images that he took. In addition, my mother is a nurse who knew many physicians that provided me with encouragement.”
“Remind yourself from time to time why you started what you are doing. If you can’t remember, then go back to where you can remember it. Be willing to change yourself. Look at the big picture; be willing to give back for, if you honestly look at your life, everything has really been given to you.”

Dr. Dennis Lamenti

**Education**

**Dr. Lamenti passed away in October 31, 2012.**

**Awards/Recognition**

- First Native American to graduate with degrees in astronomy.
- Created the First Nations Educational and Cultural Center in 2007 at Indiana University.
- Assisted in developing an algorithm for the sky transparency at the observatory on Mauna Kea Hawaii.
- Created a portal for observers to examine nightly observations of supernovae candidates for the Sloan Digital Sky Survey II. This phase was the second of an international, multi-institutions effort to map the universe.
- PowerPoint Chemically Peculiar Stars

**Reasons Why You Like Your Job**

*Continue*

1. Spiritual: I want to know more of the Holy People (Diyin Diné), so I learn more about creation. Astronomy is a way to study the creation of the universe and its path toward equilibrium.

2. Intellectual Curiosity: How do stars form? How do galaxies evolve? What fills the space between stars and galaxies? How are they connected? By bringing all fields of science; physics, mathematics, chemistry, thermodynamics, quantum and relativistic mechanics, to name a few, challenges every part of me by the research necessary to examine such questions.

3. Hozho: A Navajo way of living in balance and beauty. This type of work is meaningful to me and requires discipline. Interdependence, creativity, an open mind and by the very nature of studying the universe ultimately humbles me.”

How did you become interested in this career?

At first I thought I would go into particle physics, but as I became more intrigued by the work in dark matter, and the evidence that the universe is filled with dark energy—I was so taken by these mysteries that I really had to learn more! I knew that this field was part of me. The cosmos holds all our stories, and astronomy worked in with my Navajo understanding life, the cycle, beauty and harmony of it all.

continue to next page
**Special Job Skills**

Skills are something that can be learned, developed and honed. For me, the greatest skill is to be able to convey complex phenomenon in such a way that my grandfather could understand it. Other skills include a good understanding of physics and mathematics. I also believe the future of our understanding of the universe is really in an indigenous holistic approach to the questions and interpreting data.
“Go and do what you want, don’t let people tell you that you that you can’t.”

Stephanie Moose

**Education**
First Responder Firefighting School
*Nebraska Volunteer Firefighter Association*

**Three reasons why you like this job.**
1. I like to help the people in the community to be safe.
2. In a small community what I do is important.
3. I like to drive the big truck.

**How did you become interested in this profession?**
“When I was in high school, I wanted to be a firefighter. When I was able to get the training, I decided to do it.”

**What are some special skills you need for this job?**
- Stay calm in stressful situations
- Stay fit
- Be brave

**Apache 8 is a group of Native American women fighting wildfires.**
“We are each born into this world with ‘resilience’ and our task is to learn how to tap into our strength and not give up!”

Dr. Iris PrettyPaint

Blackfeet/Crow
Social Worker
Hardin, Montana

Education
B.S.W. Social Work, University of Kansas
M.S.W. Masters of Social Work, University of Minnesota
Ph.D. Social Work, University of Minnesota

Dr. PrettyPaint has over 30 years experience as an educator and researcher. She is a leading authority on cultural resilience, student retention, and indigenous evaluation with American Indian and Alaska Native communities.

Benefits
1. Provides the opportunity to work with tribes, colleges, families and communities.
2. I get to travel, visit and share my work with indigenous people all over the world.

Motivation
“I am interested in the kind of research that empowers students, improves programs and honors the intellectual wisdom of our elders.”

Special Job Skills
- Knowledgeable of federal, state and tribal policies that have an impact on health, education and sovereignty.
- Facilitation skills to assist with redefining core issues, creating inclusivity and promoting accountability.
- Passionate about the possibility of creating healthy, functional institutions for tribes.

PrettyPaint speaking at the Go Peace Conference, July 2013
“Do not give up on your dreams. Keep trying, studying and striving; a job well done is its own reward. Serve your community as much as you can and freely share any and all knowledge you have the good fortune to obtain. Be ever thankful for the talents and gifts you have been given, and use them always to the fullest.”

Dr. Jessica A. Rickert

---

Education

D.D.S.  
Doctor of Dental Surgery  
University of Michigan

Awards/Recognitions

- Dr. Rickert was inducted in the Michigan Women’s Hall of Fame for being the first female Indian dentist in the world.
- American Dental Association’s Access Award
- Inducted into the Wyoming Public Schools Hall of Fame
- Appearances in many media venues, including radio, television and documentaries.
- National panelist, participating in many prestigious foundations and workshops.

Awards/Recognitions Continue

- Health consultant and contributor to Native News Online, Prairie Band Potawatomi News and to the Native American Rehabilitation Association.

Motivation

“I have always wanted to help people, to improve their lives in a meaningful way. I loved math and science and was very good at them. I desired a practical application of my fascination with the biological sciences, and dentistry fulfills that every day. No two patients are ever alike. My own medical doctor encouraged me to pursue medicine or dentistry when I was 12 years old. In college, I decided that dentistry would fit as a career as well as with my personal life goals. I also wanted to be a respected professional in my community.”

Benefits

- A dentist helps many patients, from 6 months to 110 years old, improve their lives by treating dental diseases.
- Dentistry is constantly challenging and every day is different, never boring. Modern dentistry is always developing.
- Private practitioners have control over their dental careers and working conditions. This allows many opportunities for quality family time.
Special Job Skills

- A dentist must have a good heart, and must be kind and caring.

- An inquisitive mind is required because the profession is always changing.

- A strong, academic talent for the sciences and math is required.

- Fine motor skills are required daily. There are many ways to develop this, including playing a musical instrument.
“Work hard in school and every other area in life. Hard work and determination will always allow you to succeed. Don’t be afraid to be different and follow your own path.”

Dr. Myhra Roper

Cheyenne River Sioux
Physical Therapist
Iowa City, Iowa

Education

B.S. Medicine
University of Nebraska-Lincoln

DPT Doctorate in Physical Therapy
University of Nebraska Medical Center

How did you become interested in this career?

“I was always interested in the medical field and athletics, so I decided to job shadow a physical therapist during my junior year in high school. I decided to pursue this path because the job looked interesting and fun.”

Reasons why you like your job?

• Work with many different people.
• Help people feel and move better.
• Teach people how to be fit.
• Help people return home and to their daily lives.
• I have a good work/home life balance being a Physical Therapist.

Special Job Skills

• Good people and communication skills.
• Interest in science and math.
• Desire to help and teach others.
• Good critical thinking skills.
“Enjoy your time in school, make good decisions, bounce back during the tough times, stay true to yourself, and define yourself. You are on a path that only you will take School is your tool, its there for your to use. Take advantage of it, let it give you opportunities, it can take you places if you let it.”

Joe Rousseau

Cheyenne River Lakota Sioux
Middle School Science Teacher
Lincoln, Nebraska

Education

M.A. Curriculum and Instruction, University of Nebraska-Lincoln

Mr. Rousseau works with expelled students and serves on the Indian Parent Advisory Council for the school district.

Awards/Recognition

Indian Center Board Member, Lincoln Nebraska

Motivation

“I thought back to all the jobs for which I had been hired; grocery clerk, store clerk, swimming instructor, lifeguard, and aviation electronic technician in the Navy. I thought of the most enjoyable parts of each of them, put all of this together and come up with teaching.”

Benefits

• I like teaching because each year is unique, eventful and every day is different.
• Teaching is not easy, it is challenging.
• Teaching has many directions, there is always something new to try.
• Generosity-I get to give back to the community.

Special Job Skills

• To be a teacher you need to have a strong sense of commitment to your community.
• Believe all students can learn.
• Have a passion for learning.
• Communication, leadership are all good skills.
“Don’t give up! You may have to work longer and harder to get to the same goal, but when you get there, you are their equal.”

Todd Runnels

**Santee Sioux**

**Industrial Technology Teacher**

**Niobrara, Nebraska**

---

**Education**

<td>Wayne State College, Wayne Nebraska</td>
</tr>
</tbody>
</table>

---

**Three reasons why you like your job**

1. Work with young people.
2. Help students set and achieve goals.
3. Lead Santee youth in competition against the world.

---

**How did you become interested in this profession?**

I have always wanted to be an Industrial Technology teacher. I was inspired by my own Industrial Arts teacher, Joe Johnson, who was a Santee Sioux tribal member. Mechanics and building have always come easy to me and I am happy to show others what I know.

---

**What are some special skills you need for this job?**

Patience—the students don’t do things as well as adults. They have to be taught the process, given the skills and provided the experience.

Positive attitude—some days could be better, the next day usually is.
"We have one Earth, we need to help her stay healthy so we can all continue."

Julia Sage

Santee Sisseton-Wahpeton Sioux
Environmental Specialist
Niobrara, Nebraska

Education

A.A. Natural Resources, Nebraska Indian Community College, Niobrara, Nebraska

Benefits

1. Helping the Earth
2. Working outside
3. Guarding the health of creation

Motivation

“I have always liked working in the outdoors and had a passion for environmental issues. It started out with a love of nature and evolved into strong beliefs about the importance of environmental equity and of reversing some of the harm done to the Earth.

Special Job Skills

• Geographical Information System (GIS) and Global Positioning System (GPS)
• Putting together documents for environmental sampling
• Collecting data, writing reports, and taking action based on research or observation of food, air, soil and water.
“Any obstacle can be overcome; achievement is merely the marriage of dreams and labor. Economic conditions, ethnicity, and every other factor cease to matter when the life of an animal is on the line; a Native girl from a small farm in Nebraska can be in an intense operating room assisting an emergency surgery on a millionaire’s horse.”

Edie Siddle

Oglala Lakota
Veterinary Technician
Sheridan, Wyoming

Education

A.A. Associate of Arts, Laramie County Community College, Cheyenne Wyoming
A.A.S Associates of Applied Science, Eastern Wyoming College

Motivation

“Growing up on a small horse ranch, I have always had a desire to be around animals and to help them in anyway that I can. I believe that helping animals is a very noble cause and is one we can trace back to our ancestors who depended on animals for survival. Being involved in the treatment of injured animals as well a preventive medicine for others is very satisfying.”

Benefits

• Variety is one of the best benefits of my profession, I get to participate in a variety of procedures and work with a variety of animals.

• It is very satisfying to help a creature in need and I enjoy getting to witness the progress of animals as they recover due to our treatment. It is very fulfilling to help something which cannot help itself.

Special Job Skills

• As a vet-tech, you have to wear several hats. I perform the duties of a radiologist, anesthesiologist, dental hygienist, nurse and even occasionally perform surgeon-like tasks like suturing incisions or wounds.

• Thorough knowledge of anatomy, physiology, chemistry, and biology are required to maintain proficiency and are attained through schooling at a reputable college.
“Getting an education is so important! My elders have always said that getting an education is the key to helping ourselves and our people. Although it can be tough in today’s world, it is worth it!”

Dr. Rosette Mitexi Stabler

Omaha Tribe
Occupational Therapist
Walthill, Nebraska

Education
Doctorate in Occupational Therapy
University of Nebraska Medical Center

Motivation
“When I was younger, I received treatment for my hand and was able to regain its function through therapy and splinting; so when it was time to consider careers, I knew that this was what I wanted to do. Occupational therapy is a powerful health profession for native people because we’re not solely looking at the medical ailment, we are considering the person, their environment, family and spiritual well being.”

Benefits
- It looks at the whole person: mind, body and spirit.
- I can help many different people, and help them achieve what is meaningful to them.
- There are endless job opportunities in many different places - hospitals, schools, mental health treatment centers, prisons and clinics.

Special Job Skills
- Need to be creative and think outside the box.
- Listen well and relate to people
- Having a heart to want to help people
- Motivation to be an advocate for your patients.
“Do your best and graduate from college.”

Millie Swalley

Santee Sioux
Emergency Medical Technician
Niobrara, Nebraska

Education

EMT Training  Nebraska Indian Community College
Currently not offered at this college

How did you become interested in this profession?

“I wanted to be an EMT because I was always interested in nursing and helping people.

3 Reasons why you like your job

1. Helping people with health issues.
2. Going to conferences for more training.
3. Training onside in the community.

Special Job Skills

• You can’t be afraid of blood.
• Stay calm, patient and be able to make good decisions when in a crisis.
“No one care how much you know until they know how much you are. I’ve tried to use my professional education and career, in the words of George Washington, “...not only for the pursuit of one’s own happiness, but for the future welfare of others.”

Dr. Randy Toothaker

Cherokee
Dentist and Prosthodontics Specialist
Lincoln, Nebraska

Education

D.D.S.  Doctor of Dental Surgery, University of Oklahoma, Oklahoma City, Oklahoma

Board Certified Prosthodontics Specialist

Teaches at the University of Nebraska Dental College, Lincoln, Nebraska

Motivation

“I was fortunate to be exposed to crossing cultural boundaries early in my childhood when a dentist of another race, during a period of social unrest in the 60’s and 70’s, took a personal interest in our family. That impresses me to this day and I will be forever grateful. My career experiences have since included the privilege of meeting and treating individuals all across our nation and worldwide, from South Korea to the Sudan.”

Benefits

Meet people from all aspects of society.

Develop relationships and trust with my patients and their families for a lifetime.

Constantly exposed to new materials and situations.

Special Job Skills

• Sense of service to fellow man.

• Strong desire to give patients confidence and well-being.

• Steer students toward health career fields including dental hygiene and laboratory technology.

Grants and Awards

• January 2005: $227,459, from the Jacob and Valeria Langeloth Foundation of New York, New York, in coordination with the UNL Department of Anthropology and the Nebraska Foundation, for the implant treatment of 20 Sudanese refugees in the state of Nebraska.
“Treat people the way you want them to treat you. Know that money is not the only measure of success.”

Dr. Wayne Watkins

Oglala Lakota Pine Ridge
Veterinarian
McCook, Nebraska

Education
B.S. Chadron State College
DMV Veterinary Medicine, Ohio State University

Motivation
“I have always been interested in the sciences, but was intrigued by the variety offered in veterinary medicine after doing some outreach work while I was in graduate school.”

Benefits
• Diagnosing illnesses in animals.
• Performing surgery on an animal to make it better.
• There is always a variety of things to do and animals to see in a day of work.

Special Job Skills
• Having compassion for people and their pets.
• Being able to have the patience to listen to a complete history of the animal and it’s symptoms.
• Communicating your diagnosis and treatment regimen in a way that every client can understand.
• Ability to juggle your life around the demand of the career.
“Knowledge breeds confidence and together they open the doors to your future.”

Dr. David R. Wilson

Navajo
Molecular Immunologist
Manuelito, New Mexico

Education
B.S. Microbiology, Arizona State University
Ph.D. Molecular Biology, Arizona State University

Awards/Recognitions
• Deputy Director of American Indian Affairs and Science Policy in Washington, D.C.
• Life Member of SACNAS
• Member of SACNAS

Special Job Skills
• Strong sense of curiosity.
• Ability to work in teams effectively.
• Ability to effectively communicate ideas and results to both scientists and non-scientists.
• Apply these “transferable skills” to whatever I do in life.

Motivation
“My motivation to continue on my path is helping other members of our Native communities to be successful in their science careers. Creating communities of Native scientists that support each other to improve the quality of life for all American Indians is my ultimate goal.”

Benefits
• There are endless numbers of questions in biology that need answered. Many of these questions will positively influence our way of life.
• Creating new and innovative methods to answer and understand biological systems.
• Helping provide a more detailed picture of how Mother Nature works.
“Keep your life as simple as possible. Look for solutions to solve your own problems or get advice from more than one person to help you make choices in order to move forward.”

Larry Wright, Sr.

Ponca Tribe of Nebraska
Buffalo Herd Manager
Niobrara, Nebraska

Personal Information
Marty Indian School
Veteran of the Vietnam War

Read about Mr. Wright’s buffalo herd.

Motivation
“This job gives me the opportunity to work for my tribe as an active member of the Intertribal Bison Cooperative helping to restore buffalo to Indian land. The buffalo hold much culture and spiritual significance to our Native American tradition. They have provided a major source of food, shelter, and clothing and continue to teach us the importance of family as well as being part of many spiritual traditions. I feel proud to ensure that the buffalo continue to be part of not only our lives, but our children’s and all generations to come.”

Benefits
- Working outdoors
- Being able to be with the buffalo and constantly learn about their behavior.
- Sharing the things I’ve learned about the buffalo with others.

Special Job Skills
- Knowing how to fix farm machinery.
- Studying the herd, learning their behavior and characteristics, the condition of individual animals, the pasture and fences.
- Planning, assessing improvement, and changes for the coming seasons to avoid problems.
“To succeed, you must first fail. Don’t be afraid to fail, but don’t approach an endeavor expecting fail. Failure (and practice) provides the experience and knowledge, which are two important components for leadership.”

Dr. Julius Yellowhair

**Navajo (Diné)**
**Optical Engineer**
**Albuquerque, New Mexico**

---

**Education**

- B.S. Optical Engineering, University of Arizona
- M.S. Electrical Engineering, University of New Mexico
- M.S. Optical Science, University of Arizona
- Ph.D. Optical Science, University of Arizona

**Awards/Recognitions**

- Featured in the SACNAS Journal.
- Outstanding Graduate Student in Electrical Engineering
- US Patent No US 8,582,092,B1

**Reasons why you like your job**

1. The work is never boring; it is always challenging and fun.
2. I get to work and learn from very smart and talented people.
3. I work on projects that I enjoy and make a positive impact for our future society.

**How did you become interested in this career?**

“Since I was in grade school, I always enjoyed math and science. Math was always my main interest. I spent much time studying math on my own. I used to read and study math books under a kerosene lamp at night and play math games while I was doing my daily chores.”

**Special Job Skills**

Math skills are essential if you pursue a career in science, technology and engineering. Creativity is also important to come up with new and fresh ideas along with new ways of doing things. Having initiative is also a necessary skill—this true in any field. If you don’t have the initiative, you can feel lost in your employment and can get left behind.

Dr. Yellowhair works at the Sandia National Laboratories in New Mexico. This is a fascinating facility.
“Treat all people/things with respect no matter what age, gender, race or ethnicity. Be a well-rounded individual and exercise your mind, body and spirit. Do something that you are passionate about and surround yourself with good people.”

Ramona Zephier

Cheyenne River Sioux
Physician Assistant
Omaha, Nebraska

Education

MPAS
Master of Physician Assistant Studies
University of Nebraska Medical Center,
Omaha Nebraska

How did you become interested in this career?

“I have been interested in orthopedics every since having several sports related injuries in high school and college. I chose to attend physician assistant school because I felt it would better suit my lifestyle as a working mother. After doing several rotations in surgery, I loved being in the operating room. Because of my own past injuries, I have found that I can relate to my patients.”

Reasons why you like your job:

1. I am able to help people and make a difference in their life.
2. I enjoy the people with whom I work.
3. I am able to have continuity of care with my patients. I see them before, during and after surgery.

Special Job Skills

You must have good reasoning skills in order to interview, diagnose and develop a plan of treatment for the patient. Time management is important, as well as being able to communicate well with your team of other health care providers.
Occupations

Occupations will list teaching points, publications to read, websites to explore and more. Each occupation is linked to the individual(s) in the previous chapter.

Most occupations have a two-three minute video on the career overview.
Agricultural Manager

Role Model
Colin Jones

- South Dakota Standards

Teaching Points
Talk to students about military service being an honorable way to serve our country and to our people. For many young Americans, the benefits of serving can be tremendous: training, honor, education, travel, pay and self-discovery. However, military service is not for everyone. It requires self-discipline, intense physical work and time away from family and friends while protecting America and its citizens at home and abroad. Help students understand service options and benefits so they can make informed choices. Above all, let them know that each decision—to serve our country is not to serve—is personal, vital and honorable.

Suggested Books
- Operation: Homefront, Caroline Cooney
- Jobs on a Farm (World of Farming), Nancy Dickmann
- Jobs in Sustainable Agriculture (Green Careers), Paula Johanson
- Agriculture: The Food We Grow and Animals We Raise, Julie Kerr Casper
- Food, Farming and Hunting (American Indian Contributions to the World), Emory Dean Koeke, Kay Marie Porterfield
Anthropologist

Role Model
Sven Haakanson

Teaching Points
Anthropologist is the study of people—where they came from, how they live differently in different societies across the world, how they interact with each other and with their environment, throughout different places and times. Anthropology is an interdisciplinary science, however the field focuses in detail on cultural, biological, linguistic, and archaeological research.

**Teaching Points**

Astronomers use the principles of physics and mathematics to learn about the fundamental nature of the universe and its components, including the sun, moon, planets, stars, and galaxies. Astronomy is sometimes considered a subfield of physics. Astronomers solve problems in navigation, space flight, and satellite communications. They also develop the instrumentation and techniques used to observe and collect astronomical data. Almost all astronomers do research. Some are theoreticians, working on the laws governing the structure and evolution of astronomical objects. Others analyze large quantities of data gathered by observatories and satellites and write scientific papers or reports on their findings. Some astronomers operate large space-based or ground-based telescopes, usually as part of a team. However, astronomers may spend only a few weeks making observations with optical telescopes, radio telescopes, and other instruments. A small number of astronomers work in museums housing planetariums. These astronomers develop and revise programs presented to the public and may direct planetarium operations.

Select bioethics

Dr. Bitsóí has numerous publications available on the internet to explore.
Teaching Points Continue

On livestock-producing farms and ranches, work goes on throughout the year. Animals, unless they are grazing, must be fed and watered every day. Many livestock managers monitor and attend to the health of their herds, which may include assisting in the birthing of animals.

Most herd managers receive their training on the job, often by being raised on a ranch or farm. However, the completion of a 2-year associate degree or a 4-year bachelor’s degree at a college of agriculture is becoming increasingly important for those who expect to make a living at ranching or managing herds. Those new to the field often spend time working under an experienced rancher to learn how to apply the skills learned through academic training. Those without academic training often take many years to learn how feeding or breeding affect the raising of animals along with other aspects of the job.

Grandfather Buffalo, Jim Arnosky
Buffalo Jones: The Man Who Saved America’s Bison, Carol A. Winn
Buffalo for the Broken Heart: Restoring Life to a Back Hills Ranch, Dan O’Brien
Some may specialize in a particular chemical process, such as oxidation or polymerization, while others may specialize in a particular field, such as nano materials, or the development of specific products. They must be aware of all aspects of chemical manufacturing and how the manufacturing process affects the environment and the safety of workers and consumers.

Engineers should be creative, inquisitive, analytical and detail oriented. They should be able to work as part of a team and to communicate well, both orally and in writing. Communication abilities are becoming increasingly important as engineers interact more frequently with specialists in a wide range of fields outside of engineering. A chemical engineer is either currently, or has previously, occupied the CEO positions for: 3M, Dupont, General Electric, Union Carbide, Dow Chemical, Exxon, BASF, Gulf Oil, Texaco, and B.F. Goodrich. Even a former director for the CIA, John M. Deutch, was a chemical engineer in training.

*Product Testing: The Chemistry of Ice Cream,* Dianne N. Epp

*History of Chemical Engineering,* Janice Van Cleave

*New PEM Brings Goal of High Temp Fuel Cell Closer,* May 2004, Chris Cornelius

**Role Model**

**Chris Cornelius**

**Teaching Points**

Chemical Engineers apply physical science and math to convert raw materials to chemicals into more useful or valuable forms. The modern discipline of chemical engineering encompasses much more than just process engineering. They now produce high performance materials used in other applications. Here are a few:

- Aerospace—dye sensitized solar cells and other types of fuel cells.
- Automotive—adhesives and composites for vehicles.
- Biomedical—bio-compatible materials for implants and prosthetics, gels for medical applications.
- Electronic—optical or spectroscopic properties for opto-electronics devices.
- Environmental—air and water treatment technologies and separation processes for pollutants.
- Military applications—pliable bandages that can stop fatal bleeding for trauma.
- Nanotechnology—regenerative medical materials to peed the repair and regrowth of bone blood vessels and soft tissue.
Role Model

Myles Jones

Teaching Points

Medical and health service managers are also referred to as healthcare executives or health care administrators. They plan, direct, coordinate and supervise the delivery of healthcare. These workers are either specialists in charge of a specific clinical department or generalists who manage an entire facility or system. They must be familiar with management principles and practices. This is an ideal job for people with an interest in medicine or health care, who do not want to manage patient care and/or have a low tolerance for “blood and guts.”

A master’s degree in health services administration, long-term care administration, health sciences, public health, public administration, or business administration is the standard credential for most generalist positions in this field. However, a bachelor’s degree is adequate for some entry-level positions in smaller facilities, at the departmental level within health care organizations. Physicians’ offices and some other facilities may hire those with on-the-job experience instead of formal education.

Jessica A. Rickert

Teaching Points

Grades K-2: Dentists are important to our community because they help us take care of our health, our teeth and mouths, just like our other doctors take care of other parts of us. Talk to students about good hygiene through brushing, flossing and care of teeth.

Grades 3-5: Dentistry as a career can be tied to the studying of the digestive system and types of teeth. Studies are showing that oral health care has a huge impact on the rest of our body’s health. Reemphasize good hygiene through brushing, flossing and healthy snacks.

Grades 6-8: Students could look at specialities of dentistry, i.e., orthodontics, periodontics, as possible careers as well as how they affect their personal lives and those of their friends.

February is dental health month.

Career Overview (2 minutes)
Role Model

Millie Swalley

Teaching Points

Emergency Medical Technicians (EMT) are also known as ambulance technicians. They are healthcare providers trained to provide pre-hospital emergency medical services. They serve a vital service and role in our communities. In many places, they are volunteers, doing great work and saving many lives throughout the year. This is a job that can be done while simultaneously having another career or job.

EMTs respond to emergency calls, perform certain medical procedures and transport patients to hospitals. They may work in an ambulance service (paid or voluntary), as a member of rescue teams/squads, or as part of the fire or police department. EMTs are trained to assess a patient's condition and to perform emergency medical procedures needed to keep patients alive until they can get advanced medical care.

Environmental Engineer

Role Model
Otakuye Conroy

Teaching Points Grades K-8

Environmental Engineering is the application for science and engineering principals for improving the environment (air, water, and/or land resource) and providing ways to ensure healthy water, air and land for humans and other organisms to live on.

Environmental engineers work with issues involving water, and air pollution control, recycling, waste disposal, and public health, have some knowledge of environmental engineering law, and study the environmental impact of proposed construction projects.

Environmental Specialist

Role Model

Julia Sage

Teaching Points

Environmental specialists protect and preserve the well-being of the environment and human health. The broad field of contemporary environmental problems faced by the nation include drinking and surface water quality, solid and hazardous waste storage and disposal, indoor and outdoor air quality, radiological health, occupational health, systems ecology (interrelationship of organisms and their environments), and housing hygiene.

Environmental specialists-technician level, collect and analyze hazardous samples, record information, prepare reports, maintain monitoring equipment, inspect facilities such as restaurants, swimming pools for cleanliness and safety, and provide supportive services to environmental engineers and scientific professionals. Environmental specialists-professional level act as consultants, investigators, and evaluators for environmental health and safety issues. They base decisions on concrete evidence gathered under strict standard.

A bachelor’s degree or equivalent experience is required for most environmental specialist positions.

Career Overview (2 minutes)
Firefighter

Role Model

Stephanie Moose

Teaching Points

A firefighter's goal is to save life, property and the environment. Because firefighters are often the first medically trained responders to arrive on the scene of a medical emergency, they provide many valuable services to the community they serve as Emergency Medical Services, Emergency Medical Technicians, or Licensed Paramedics.

Firefighters are community helpers and are honored regularly in the early elementary classroom. Teachers of older students can also honor this profession by including them in the science curriculum. Fire science involves learning about physics, building construction, wind and weather patterns, as well as chemistry in learning about materials and their combustion points.

Fire in Their Eyes: Wildfires and the People Who Fight Them, Karen Magnuson Beil

FireRescue Magazine is published specifically for the fire company officer and line fire fighter. Covering news from around the country, the magazine depicts fire departments in action with bold photos and informative text.
Immunologist

Role Model
David Wilson

Teaching Points

Immunologists particularly are interested in diseases that affect natural immunity. They focus on allergies, sinus infections, pneumonia and abscesses that occur repeatedly even with treatment. Immunologists include research scientists (Ph.D.) who work in laboratories. Immunologists also include physicians (M.D.) who, for example, treat patients with immune system disorders. Some immunologists are physician scientists who combine laboratory research with patient care.

Grades K-2: Every child has had an immunization shot—ask students why they had to have those shots to protect them from getting that disease. That’s the job of our body’s immune system and the job of immunologists to find ways to protect us from disease. Start a discussion of only taking your medicines and not someone else’s, because medicine is specialized for treating certain conditions.

Teaching Points Continue

Grades 3-5: When studying the body systems, especially the immune system, raise questions about why we have vaccinations, how people get sick, why some people are allergic to certain things, etc.

Grades 6-8: Have a discussion of those diseases that attack the immune system i.e. multiple sclerosis, HIV, and their long term effects, maybe appropriate for students of this age.

Industrial Technology Teacher

Role Model

Todd Runnels

Teaching Points

A degree in Industrial Technology is ideal for individuals that are good at science and intrigued by the business world. Industrial technologists apply the scientific method to business problems by studying inputs and outputs, conducting experiments and gathering data to skillfully manage technological systems. This field is not to be confused with industrial engineering. Industrial Technologists do not study how to actually design industrial applications or systems, but focus instead on their operation and management. Subjects covered in Industrial Technology degree programs include: chemistry, physics, math, manufacturing and the scientific method. Possible career paths for graduates in this field include: Industrial Production Management-overseeing the production of goods in an assembly or other production facility.

Teaching Points continue

Cost Estimation-pricing parts and materials to product goods or maintain business functions.

Computer Systems Analyst-examining and modifying information systems to best suit an organization’s needs.

Teaching-sharing passion of industrial technology and preparing youth for a profession in this career field.

A lab supervisor is an individual who oversees employees, tests, and experiments in a laboratory. Other tasks may include actively leading teams of researchers on projects, personally analyzing experimental results, and writing technical and professional reports. Scientific laboratories found at research institutions, pharmaceutical companies, and biotechnology firms depend on lab supervisors to ensure projects and trials are carried out appropriately. When results from laboratory tests are available, the lab supervisor often explains findings. Individuals who monitor students and research in university labs are often designated lab supervisors. Often many different professors conduct independent research and teach out of the same laboratory, and it is up to the lab supervisor to collaborate with them to set schedules.
Marine Biologist

Role Model
Scottie Henderson

Teaching Points
Marine biologist study marine organisms, their behaviors, and their interactions with the environment. They observe, protect, or manage marine organisms, whether they are microbe, plant or animal. Marine biology is considered one of the most all-embracing fields of oceanography. Because there are so many topics one could study within the field of marine biology, many researchers select a particular interest and specialize in it. Specializations can be based on a particular species, organism, behavior, technique, or ecosystem.

Suggested Books

My Visit to the Aquarium, Aliki

The Marine Biology Coloring Book, second edition, Thomas M. Niesen

Animals of Sea and Shore (A New True Book), Illa Podendorf

Occupational Therapist

Role Model

Rosette Stabler

Teaching Points

Occupational Therapists (OTs) help people improve, develop and recover and maintain their ability to perform tasks in their daily living and work environments. They work with individuals who have conditions that are mentally, physically, developmentally, or emotionally disabling. OTs not only help people improve basic motor functions and reasoning abilities, but also compensate for permanent loss of function. Their goal is to help people have independent, productive and satisfying lives.

Career Overview (2 minutes)
**Physicists**

**Role Model**

Fred Begay

**Teaching Points**

Physicists study the natural world, from the tiniest subatomic particles to the largest galaxies. They do experiments to discover the laws of nature. They also learn about energy, study how it changes from one form to another. Three major employers of physicists are academic institutions, government laboratories, and private industries. Many trained physicists apply their skills to engineering, computing, and finance. Some physicists combine their knowledge with future training in other disciplines, such as patent law in industry or private practice. You usually need a doctoral degree (Ph.D.) to work as a physicist. A doctoral degree takes several years of graduate school to complete. People with only a master’s degree in physics often get jobs in manufacturing or in research and development. Some teach in high schools or at 2-year colleges. Those with only a bachelor’s degree often work as technicians or search assistants. Some may be able to work in applied research jobs in private industry or in non-research positions in the government.

**Teaching Points Continue**

Some become science teachers in middle schools or high school. To be a physicist, you should study math and science. You must be good at solving problems and be curious about the world around you.

Radiology Technician

Role Model
Craig Lafferty

Teaching Points

Grades K-8: If you’ve ever had an x-ray, you’ve probably met a radiologic technology. But, did you know there’s actually are four professional practice areas for radiologic technologist?

Radiographers use diagnostic imaging equipment to produce images of the tissue, organs, bones and vessels of the body. Some radiographers specialize in mammography, computed tomography (CT scans), magnetic resonance imaging (MRI) or other types of imaging.

Sonographers use high-frequency sound waves to create images of anatomy. Nuclear medicine technologists use radiopharmaceuticals and special cameras to produce images of organs and reveal their function.

Radiation therapists administer highly focused forms of radiation to treat cancer and other diseases.

Career Overview (2 minutes)
Teaching Points

Grades K-8: School psychologists work with students in early childhood, elementary, and secondary schools. They collaborate with teachers, parents, and school personnel to create safe, healthy, and supportive learning environments for all students. School psychologists address students’ learning and behavioral problems, suggest improvements to classroom management strategies or parenting techniques, and evaluate students with disabilities and gifted and talented students to help determine the best way to educate them.

School psychologists are trained in both psychology and education. They must complete a minimum of a Specialist-level-degree program that includes an internship.

School psychologists must be certified and/or licensed by the state in which they work. They may be nationally certified by the National School Psychology Certification Board (NSPCB).

Role Model

Wayne Watkins

Teaching Points

If you like animals and science you might want to consider being a veterinarian. Animal health care is in many ways similar to human health care, but with a few differences. Veterinarians also have the opportunity to specialize either in large or small animals as well as marine mammals or zoo species.

Veterinarians prevent problems by giving vaccinations and check-ups and fixing teeth. They also teach owners how to feed and train their animals. When an animal is sick, vets examine it to find out why it is not well by looking for clues in the way an animal looks, acts, and smells.

All vets need to go to college first and then go to veterinary college for four years. While in vet school, they learn more science, how to work with animals, do surgery, and do laboratory tests.

Suggested Books

*I Want to Be a Veterinarian*, Catherine ’Neill

*Grace A Day in the Life of a Veterinarian*, Heather Adamson

*Vetting: The Making of a Veterinarian*, Dr. Pete Freyburger

*Caring for Your Pets: A Book about Veterinarians*, Ann Owen
