In a random sample of schools, students from a random sample of 9th-12th grade classes are asked to complete the YRBS. The survey asks about six categories of behaviors that are directly related to the principal causes of disability, disease, and death:

1. Unintentional and intentional injuries
2. Tobacco use
3. Alcohol and other drug use
4. Sexual behaviors
5. Dietary behaviors
6. Physical activity

Results from the most recent YRBS are available at www.education.ne.gov/csh/2018-19-ne-yrbs-results/ or by calling (402) 617-5796.

The School Health Profiles

In 1997, the Institute of Medicine (IOM) recommended that US schools require a one-semester health education course at the secondary school level. The Institute’s report states that school health education could be one of the most effective means to reduce and prevent some of the nation’s most serious health problems, including cardiovascular disease, cancer, motor vehicle crashes, homicide, and suicide.

Prior to the IOM Report and beginning in 1995, the CDC worked with state education authorities to develop a survey of schools enrolling students in grades 6 - 12 that described the school’s health education and health promotion activities.

This survey, known as the School Health Profiles (SHP), was first conducted in 1996. The survey asks principals and lead health educators to complete two different surveys. The surveys ask about health education, physical education, asthma management, school policies related to HIV/AIDS, tobacco use prevention, intentional injuries and violence, physical activity, food service, and family and community involvement in school health programs. The SHP has been completed biannually in NE since 1996 and all have been weighted.

Results from the SHP for Nebraska are available from the NDE at www.education.ne.gov/csh/2018-school-health-profiles/ or by calling (402) 617-5796.
## NE/US Comparison

Below is a comparison of the Nebraska and US health practices of adolescents using the 2018-19 National Youth Risk Behaviors Survey data.

### Alcohol and Other Drugs Use

<table>

</table>
School Health Education

Every two years principals and lead health educators in a sample of public schools with grades 6-12 complete the School Health Profiles questionnaire about their school’s health program. This fact sheet summarizes the status of health education programs in Nebraska schools.

Health Education in Grade 6-12 Schools
NDE 2018 School Health Profiles

Teaching

- 93% of Nebraska schools require at least one health education course. Of those:
  - 44% require one health course
  - 47% require two or more health courses
  - 67% require students who failed a required health course to repeat it
  - 7% do not require any health course

- Health is taught in all grades, but mostly in middle school/junior high school.
  - 6th grade 45%
  - 7th grade 57%
  - 8th grade 56%
  - 9th grade 67%
  - 10th grade 34%
  - 11th grade 13%
  - 12th grade 16%

Teachers

- Major emphasis in professional preparation of lead health educators:
  - Health & PE combined 49%
  - Physical education 26%
  - Family and consumer science, biology or other science 15%
  - Other education degree 3%
  - Nursing/Counseling 3%
  - Health education 3%
  - Other 2%

- Teaching experience of lead health educators:
  - One year 9%
  - 2-5 years 30%
  - 6-9 years 15%
  - 10-14 years 20%

Course Content

Student Skills Development

Percentage of teachers who tried to increase student skills in each of the following topics in a required health education course:

- Resisting peer pressure 93%
- Goal setting 93%
- Decision making 94%
- Health promotion 94%
- Communication 93%

Student Knowledge Development

Percentage of teachers who tried to increase student knowledge in the following areas in a required health education course:

<table>
<thead>
<tr>
<th>Area</th>
<th>%</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physical activity and fitness</td>
<td>97%</td>
</tr>
<tr>
<td>Tobacco use prevention</td>
<td>94%</td>

</tbody>
</table>
STUDENT SKILLS DEVELOPMENT

Percentage of schools with a health education curriculum that address specific health enhancement skills:

- Concepts related to health promotion and disease prevention 95%
- The influence of family peers, culture, media, technology, and other factors 94%
- Accessing information, products, and services 85%
- Interpersonal communication skills to enhance health and reduce health risks 91%
- Using decision-making skills 95%
- Using goal-setting skills 91%
- Practicing health-enhancing behaviors to avoid or reduce risks 93%
- Advocating for personal, family and community health 91%

Teacher’s Continuing Education

Percentage of lead health teachers who received and who desired staff development on specific topics.

<table>

</table>

WHAT CAN WE DO?

- Encourage state and local Boards of Education to provide health education in the school curriculum.
- Increase the number of staff development opportunities on health education topics.
- Require schools to employ certified Health and Physical Education teachers.
- Encourage schools to develop a workplace wellness program for staff and students.

**IMPORTANCE OF THE ISSUE**

- Alcohol use among Nebraska teens has declined considerably since the early 1990s.
- Heavy drinking is associated with an increased number of sexual partners, use of marijuana and poor academic performance.

**OTHER INFORMATION**

The Nebraska Risk and Protective Factor Student Survey, designed to assess adolescent substance use and many of the risk and protective factors that predict adolescent problem behaviors, was administered in 2018 to over 32,000 Nebraska students in grades 6, 8, 10 and 12. For further information, including full results of the survey, contact the Nebraska Substance Abuse Prevention Program at (402) 471-2353.
What’s Happening in Nebraska Public Schools?
NDE Grade 6-12 2018 School Health Profiles (SHP)

Unfortunately there is little data available describing what schools are doing about alcohol use, either in their educational programs or in their policies. Despite the fact that alcohol use is a major contributing cause of death among young people, schools are much more likely to report activities related to tobacco, violence, nutrition, and asthma than alcohol. Often alcohol and other drug-related activities are combined, making it difficult to separate alcohol-related activities and policies.

Teaching

- 94% of the schools report they try to increase student knowledge on alcohol and other drugs in a required health education course.

Teachers

- During the past two years, 41% of the lead health education teachers have participated in staff development activities about alcohol and other drugs.
- 58% of the lead health teachers would like to participate in staff development activities about alcohol and other drugs.

What Can We Do?

- Encourage others to recognize that alcohol contributes to a large number of deaths among Nebraska teenagers.
- Encourage law enforcement officials to enforce the laws related to alcohol sales and possession, and driving under the influence of alcohol.
- Community leaders should ensure that alcohol promotions and sponsorships reflect community values and follow state laws.
- Families should set standards for alcohol use, including consequences for illegal use.

Alcohol & Other Drugs Use Among Nebraska Youth, from 2012 to 2018 (YRBS)

**Nutrition & Body Weight**

**Who’s Overweight?**

**NDE Grade 9-12 2018-19 Youth Risk Behavior Survey (YRBS)**

- **Percentage of students who describe themselves as slightly or very overweight**
  - Total: 13%
  - Males: 11%
  - Females: 14%

- **Percentage of students trying to lose weight**
  - Total: 42%
  - Males: 31%
  - Females: 54%

**Importance of the Issue**

**NDE Grade 9-12 2018-19 Youth Risk Behavior Survey (YRBS)**

A body mass index (BMI), based on age, gender, height, and weight, determines whether a student is either overweight or at risk of overweight.

**How Students Manage Weight**

- Among the 42% of Nebraska high school students trying to lose weight, nearly 14% reported fasting, taking diet supplements, vomiting, or taking laxatives to lose weight or keep from gaining weight during the past 30 days.
- Female students were somewhat more likely than male students to report using a high risk weight loss method during the past 30 days.
- 20% of high school students reported the use of high-risk methods to lose weight or keep from gaining weight.

**What Are Kids Drinking?**

- **Percentage of students who drank 3 or more glasses of milk per day during the past 7 days**
  - Total: 7%
  - Males: 10%
  - Females: 4%

- **Percentage of students who drank at least one can, bottle, or glass of soda per day during the past 7 days**
  - Total: 17%
  - Males: 20%
  - Females: 13%

5% of students drank a can, bottle, or glass of soda or pop 3 or more times per day during the 7 days before the survey.
**WHAT ARE KIDS EATING?**
- 7% of students did not eat fruit or drink 100% fruit juice during the 7 days before the survey
- 8% of students did not eat vegetables during the 7 days before the survey
- 25% of students ate fruit 2 or more times per day during the 7 days before the survey
- 31% of students ate breakfast on all 7 days before the survey

**NUTRITION AND BODY WEIGHT AMONG NEBRASKA YOUTH, FROM 2012 TO 2018 (YRBS)**

<table>
<thead>
<tr>
<th>Body Image &amp; Weight</th>
<th>2012</th>
<th>2014</th>

<td>17%</td>
<td>17%</td>
<td>13%</td>
</tr>
<tr>
<td>Ate breakfast during the past 7 days</td>
<td>38%</td>
<td>36%</td>
<td>35%</td>
<td>31%</td>
</tr>
<tr>
<td>Drank three or more glasses of milk per day during past 7 days</td>
<td>13%</td>
<td>13%</td>
<td>10%</td>
<td>7%</td>
</tr>
</tbody>
</table>

**ENVIRONMENT**
- Foods in schools with vending machines/canteens/snack bars:
  - Sports drinks: 45%
  - 2% or whole milk: 16%
  - Soda pop or not 100% fruit juice: 22%
  - Frozen snacks (not low fat): 9%
  - Non-chocolate candy: 13%
  - Salty snacks (not low fat): 15%
  - Chocolate candy: 10%
  - Fruits (not fruit juice): 17%
  - Non-fried vegetables: 11%
- 60% of schools prohibited all forms of advertising and promotion of candy, fast food restaurants, or soft drinks in all locations on school grounds.

**Teachers**
- During the past two years, 35% of lead health education teachers participated in a staff development activity about nutrition and dietary behavior.
- 54% would like staff development activities about nutrition and dietary behavior.

**WHAT CAN WE DO?**
- Improve the quality of snack foods and beverages sold to children at school during the school day including a la carte in the cafeteria, school stores, snack bars, vending machines and other venues.
- Adopt policies requiring that healthy food alternatives (such as fruits, vegetables, and whole grains) be available at school-related functions.
- Increase the number of schools with a school breakfast program.

PHYSICAL ACTIVITY

WHO’S ACTIVE IN NEBRASKA SCHOOLS?
NDE Grade 9-12 2018-19 Youth Risk Behavior Survey (YRBS)

Percentage of students attending PE class five days a week

Percentage of students who were physically active for a total of 60 minutes or more per day on five or more of the past seven days

Percentage of students who exercised to strengthen muscles during 3 days or more of the past seven days

WHAT’S HAPPENING IN NEBRASKA SCHOOLS?
NDE Grades 6-12 2018 School Health Profiles (SHP)

Teaching

- Participating principals in grade 6-12 schools indicate that physical education is a required course, but mostly in middle school/junior high school.
  
  6th grade: 100%
  7th grade: 99%
  8th grade: 98%
  9th grade: 98%
  10th grade: 45%
  11th grade: 24%
  12th grade: 26%

- 53% provide opportunities for students to participate in intramural activities or physical activity clubs.

- 54% allow students to participate in physical activity breaks in the classroom, outside of physical education

Teachers

- 75% of participating lead health teachers are certified, licensed, or endorsed by the state to teach health education in middle or high school.

  - In the past two years, 46% of lead health education teachers participated in a staff development activity dealing with physical activity or fitness.

  - 59% of the health education teachers would like to participate in staff development dealing with physical activity or fitness.
**SCREEN TIME - A MAJOR BARRIER TO PHYSICAL ACTIVITY**

NDE Grade 9-12 2018-19 Youth Risk Behavior Survey (YRBS)

- 16% of Nebraska high school students spend three or more hours during an average school day watching television.
- 39% of Nebraska high school students played video games/computer games or used a computer for non-school work for three or more hours during an average school day.

**PHYSICAL ACTIVITY AMONG NEBRASKA YOUTH, FROM 2012 TO 2018 (YRBS)**

</tbody>
</table>

**2018 Physical Activity Guidelines for Americans, 2nd Edition**

Children and adolescents should participate in 60 minutes or more of physical activity per day

Most of the 60 minutes per day should be a combination of moderate and vigorous aerobic physical activity.

As part of their daily activity, adolescents should include on at least 3 days of the week:

- muscle-strengthening activities
- bone-strengthening activities

**IMPORTANT OF THE ISSUE**

- Participation in regular physical education/activity has been directly linked to academic performance, specifically in math, reading and writing scores.
- Physical education/activity reduces behavior problems in class, reduces levels of anxiety and stress, thus increasing concentration and alertness and improving self-esteem.
- Physical education/activity combined with good nutrition helps to build and maintain healthy bones and muscles, controls weight, and reduces the risks of diabetes, heart disease, and some cancers.

**WHAT CAN WE DO?**

- Support the implementation of your school wellness policies and model a physically active lifestyle.
- Encourage school programs and address policies to provide quality daily physical education, health education, and recess that help students develop the knowledge, attitudes, skills, behaviors, and confidence to adopt and maintain physically active lifestyles.
- Create a structural environment that makes it easy and safe for young people to walk, bike, and use close-to-home physical activity facilities.

WHAT’S HAPPENING IN NEBRASKA SCHOOLS?
NDE Grades 6-12 2018 School Health Profiles (SHP)

TEACHERS
In the past two years health education teachers have received staff development on the following topics:

- HIV Prevention 21%
- STD Prevention 22%
- Pregnancy Prevention 20%
- Human Sexuality 25%
- Different sexual orientations or gender identity 15%

Health education teachers would like to receive staff development on the following topics:

- HIV Prevention 38%
- STD Prevention 46%
- Pregnancy Prevention 41%
- Human Sexuality 51%
- Different sexual orientations or gender identity 37%

Percentage of teachers who tried to increase student knowledge in the following areas in a required health education course:

- HIV Prevention 85%
- STD Prevention 86%
- Pregnancy Prevention 79%
- Human Sexuality 75%

Curriculum content of schools having a required health course:

POLICY

58% of Nebraska schools have adopted groups (e.g., school health council, committee) which develop and coordinate activities on health topics. These are some topics that these groups covered in 2018:

- Identified student health needs based on a review of relevant data 62%
- Sought funding and resources to support health and safety of students and staff 53%
- Reviewed health-related curricula 76%
- Developed a written plan for a Comprehensive School Physical Activity Program, which enables students to be physically active before, during and after school 30%
SEXUAL BEHAVIOR/STDs: PART II

PREGNANCY AMONG NEBRASKA YOUTH
NDHHS Maternal and Child Health (MCH) Planning and Support

The pregnancy rate is determined by adding live births, fetal deaths and abortions by age group, dividing the sum by the total number of all females in the age group and multiplying that answer by 1000.

According to the CDC in 2018, there were 17.4 births for every 1,000 adolescent females ages 15-19, or 1,227 babies born to females in this age group. This is another historic low for U.S. teens. Although reasons for the declines are not clear, more teens may be delaying or reducing sexual activity, and more of the teens who are sexually active may be using birth control than in previous years.

CONDOM USE
The correct and consistent use of latex condoms can reduce the risk of STD transmission, including HIV infection. However, no protective method is 100% effective, and condom use cannot guarantee absolute protection against any STD or pregnancy. Abstinence from vaginal, anal, and oral intercourse is the only 100% effective way to prevent HIV, other STDs, and pregnancy.

Source: CDC Healthy Youth
https://www.cdc.gov/nchs/pressroom/sosmap/teen-births/teenbirths.htm

SEXUALLY TRANSMITTED DISEASE AMONG NEBRASKA YOUTH
NDHHS Sexually Transmitted Disease (STD) Program

Percentage of all chlamydia, gonorrhea and genital herpes cases in Nebraska in 2018 that occurred in youth under the age of 20

Chlamydia, gonorrhea and syphilis reported cases among Nebraska youth age 15-24 in 2018:

Chlamydia: 5,204
Gonorrhea: 1,113
Syphilis: 32

Nebraska national ranking for chlamydia and gonorrhea rates in 2018

Chlamydia - 42nd best (1,955 per 100,000)
Gonorrhea - 33rd best (418 per 100,000)

Nebraska is considered a low incidence state with 2,969 cumulative cases of HIV as of 2018, or 6.4 cases per 100,000 population

In 2018, 22% of all newly diagnosed HIV and AIDS cases in Nebraska were reported in the 15-24 age group.
**Importance of the Issue**

- Despite recent declines, the US has one of the highest teen pregnancy rates in the developed world.
- Age of first intercourse and the number of sexual partners is directly related to unintended pregnancy and sexually transmitted diseases.
- Nationally, gonorrhea rates are highest among persons aged 15-19.
- For young teens, the greater the age difference between partners, the more likely the relationship will include sexual intercourse.
- Human papillomavirus (HPV) is the most common sexually transmitted infection in the United States. Some health effects caused by HPV can be prevented with vaccines.

**What Can We Do?**

- Work to increase the number of schools that provide sexuality education.
- Set clear expectations, talk early and often, and supervise children and adolescents.
- Strongly encourage teens, especially young teens, to delay sexual activity.
- Encourage younger teens to spend time with same-age peers (both genders) in supervised settings and discourage single-couple dating, especially with partners who are three or more years older.
- Provide professional development opportunities for teachers.
- Encourage parents to obtain accurate information and develop their communication with children on sexual health issues.
- Call your local health department for STD treatment and clinic information.

**What’s Happening in Nebraska Schools?**

NDE Grade 6-12 2018 School Health Profiles (SHP)

**Teaching**

- Of the schools that have a required health class, 94% reported they tried to increase student knowledge on tobacco use prevention.

**Teachers**

- During the past two years, 28% of the lead health teachers participated in a staff development activity about tobacco use prevention.
- 46% of the lead health teachers would like a staff development experience about tobacco use prevention.
- Tobacco use is a learned behavior. During the past two years, 47% of the lead health teachers participated in a staff development activity about teaching skills for behavior change.
- 55% of the lead health teachers would like a staff development activity about teaching how to change behaviors.
**Teaching by Example**

- 99% of participating schools prohibit tobacco use by students during school hours, but only 91% during non-school hours.
- 95% of participating schools prohibit tobacco use by faculty and staff during school hours.

**Places Tobacco Use Is Prohibited**

NDE Grades 6-12 2018 School Health Profiles (SHP)

Percentage of participating schools that prohibit tobacco use by students, faculty/staff and visitors in school buildings and on school grounds.

<table>
<thead>

<td>96%</td>
<td>90%</td>
</tr>
</tbody>
</table>

**School Policy**

- 15% of schools provide referrals to a tobacco cessation program for faculty and staff, and 17% provide referrals for students.
- 74% of schools post signs marking tobacco-free school zones indicating where tobacco use is not allowed.

**Importance of the Issue**

- There is no safe level of exposure to tobacco smoke.
- Secondhand smoke contains more than 7,000 chemicals and chemical compounds.
- At least 70% of the chemicals found in secondhand smoke are known to specifically cause cancer.
- Secondhand smoke is responsible for tens of thousands of deaths in the United States each year.

Source: NDHHS SmokeFree Nebraska

**What Can We Do?**

- Ensure your school implements and enforces its tobacco-free policies.
- Encourage parents to discourage their children from using tobacco.
- Work with your local health department to support and enforce no tobacco policies.
- Ensure that your school has a comprehensive policy that includes all tobacco products including electronic cigarettes.

**Steps to Reducing Tobacco-Related Death and Disability**

- Prevent the initiation of tobacco use by young people.
- Promote quitting among young people and adults.
- Eliminate exposure to secondhand smoke (SHS).
- Reduce tobacco-related health disparities.

TRANSPORTATION SAFETY

WHAT UNSAFE BEHAVIORS ARE PUTTING NEBRASKA YOUTH AT RISK ON THE ROADS?

NDE Grade 9-12 2018-19 Youth Risk Behavior Survey (YRBS)

Among students who drove a car or other vehicle during the past 30 days, the percentage who texted or e-mailed while driving on one or more of the past 30 days

Percentage of students who rode in a car or other vehicle with someone who had been drinking alcohol during the past 30 days

IMPORTANCE OF THE ISSUE

Car crashes kill more young people than any other cause, accounting for nearly half of all teen deaths in America each year. Over 2,700 teens die each year in car crashes and tens of thousands more are injured.

The most common causes of teen driving crashes are the ones that young drivers (and their parents) know the least about. Combined with a lack of driving experience, the top five dangers are:

- Distractions, like cell phones and passengers
- Driving at night and drowsiness
- Speeding and street racing
- Not wearing a seat belt
- Impairments, like underage drinking and drugs

Besides the human tragedy of teen deaths, the societal costs of these crashes amount to $30 billion per year for the United States.

Source: Youth Transportation Safety Program https://www.ydriver.com
## Transportation Safety among Nebraska Youth, from 2012 to 2018 (YRBS)

<table>
<thead>
<tr>
<th>Transportation Safety</th>
<th>2012</th>
<th>2014</th>
<th>2016</th>
<th>2018</th>
</tr>
</thead>
<tbody>
<tr>
<td>Students who drove a vehicle when they had been drinking</td>
<td>7%</td>
<td>10%</td>
<td>6%</td>
<td>6%</td>
</tr>
<tr>
<td>Students who never or rarely wore a seat belt when riding in a car</td>
<td>12%</td>
<td>11%</td>
<td>9%</td>
<td>7%</td>
</tr>
<tr>
<td>Students who rode one or more times with someone who had been drinking</td>
<td>20%</td>
<td>22%</td>
<td>22%</td>
<td>15%</td>
</tr>
<tr>
<td>Students who texted or e-mailed while driving a car or other vehicle</td>
<td>47%</td>
<td>49%</td>
<td>48%</td>
<td>51%</td>
</tr>
</tbody>
</table>

Motor vehicle crashes are the leading cause of death for Nebraska teens (ages 14-19).

In 2018, 19 Nebraska teens were killed in motor vehicle crashes, of those killed, 76% were NOT wearing a seat belt.

Alcohol has been involved in 38% of all fatal crashes.

Emergency room charges for an unbelted teen are double compared to a restrained teen.

Since the implementation of the Nebraska Graduated Licensing Laws, teen crashes resulting in injury or death have dropped by 61%.

Sixty-four percent of teen driver crashes are due to improper driving. The top five types of improper driving include:

- Failure to yield
- Speeding
- Evasive driving
- Inattention/distraction (cell phone use)
- Run off road/lane

## What’s Happening in Nebraska Schools?

### NEDE Grades 6-12 2018 School Health Profile (SHP)

### Teaching

- 84% of the schools report they try to increase student knowledge on injury prevention and safety.

### Teachers

- During the past two years, 45% of the lead health education teachers have participated in staff development activities about injury prevention and safety.
- 48% of the lead health teachers would like to participate in staff development activities about injury prevention and safety.

### What Can We Do?

- Support stronger traffic laws and stricter enforcement
- Educate parents about current Graduated Driving Licensing Laws
- Educate parents about the importance of being involved with their teen driver and setting driving rules/limits
- Enhance the enforcement of current underage drinking limits
- Support peer-to-peer educational traffic safety programming in schools

</tr>
</tbody>
</table>

IMPORTANCE OF THE ISSUE

- 3.2 million students are victims of bullying each year.
- Bullying is a social problem that negatively impacts 3 out of 4 students during their school years.
- Victims and bullying-victims (children who have bullied and been bullied by others) are more depressed and have a lower self-esteem than non-victimized youth.
- Bullying was a factor in 2/3 of the 37 school shootings reviewed by the U.S. Secret Service (i.e. shooters reported being chronically victimized).
- One out of four males bullied at age 8 had a criminal conviction by age 30.
- Often, harassment is based on gender, race, religion, sexual orientation, appearance or disability.

MENTAL HEALTH & SUICIDE

WHO IS CONSIDERING AND/OR ENGAGING IN SELF-INFLICTED INJURY?

NDE Grade 9-12 2018-19 Youth Risk Behavior Survey (YRBS)

Percentage of students who felt so sad or hopeless almost every day for 2 weeks or more in a row that they stopped doing some usual activities during the past 12 months

Percentage of students who seriously considered attempting suicide during the past 12 months

Percentage of students who actually attempted suicide one or more times during the past 12 months

Percentage of students whose suicide attempt resulted in an injury, poisoning, or overdose that had to be treated by a doctor or nurse during the past 12 months

WHAT’S HAPPENING IN NEBRASKA SCHOOLS?

NDE Grades 6-12 2018 School Health Education Profiles (SHP)

TEACHING

- Teachers in 83% of participating schools tried to increase student knowledge about suicide prevention.

TEACHERS

- In the past two years, 65% of health education teachers have received staff development on suicide prevention.

However, 60% of health education teachers would like to receive staff development on suicide prevention.

*LB923 requires all public school nurses, teachers, counselors, school psychologists, administrators, and any other appropriate personnel to receive at least one hour of suicide awareness and prevention training each year beginning in the 2014-15 school year. The training must be provided within the framework of existing in-service training programs offered by NDE or as part of required professional development activities.
WHAT’S HAPPENING IN NEBRASKA?

NDHHS Child Death Review Team

Suicide Deaths to Children (ages 0-17) by Sex in Nebraska, 2004-2013

US and Nebraska Suicide Rates (deaths per 100,000) children ages 10-19 among Children, 2014-2017

Victims came from 13 Nebraska counties and were predominantly male; the youngest child was 10 year old.

IMPORTANCE OF THE ISSUE

Nebraska’s teen suicide rate continued to increase during 2012 and 2013. However, the national suicide rate has been gradually increasing since 2007.

In Nebraska suicide is the 1st leading cause of death for ages 10-14 years and the 2nd leading cause of death for ages 15-24 year.

Completed suicides of teens continue to be predominantly male.

Firearms are the methods most commonly used in completed suicides.

WHAT CAN WE DO?

- Be alert to suicidal gestures and signs that indicate risk for individual youth. Encourage help-seeking actions when at-risk youth are identified and seek immediate professional attention when necessary.
- Implement an anti-bullying policy inclusive of sexual orientation and gender identity. Increase awareness of this policy and provide training.
- Provide all youth access to confidential, professional mental health services.
- Obtain funding for needed community-based, evidence-based models on adolescent suicide prevention programs.
- Develop broad-based public education efforts to draw attention to suicide as a significant and preventable cause of death for youth.
- Store unloaded firearms and ammunition in separate locked, secure box and inaccessible locations.
- Support means restriction, including firearms and prescription medication.

Whole School Approach

A Model for Success

The Whole School, Whole Community, Whole Child (WSCC) model combines and builds on elements of the traditional coordinated school health approach and the whole child framework. Association for Supervision and Curriculum Development (ASCD) and the Centers for Disease Control (CDC) developed this new model to strengthen a unified and collaborative approach to learning and health.

The new WSCC model responds to the call for greater alignment, integration, and collaboration between education and health to improve each child’s cognitive, physical, social, and emotional development.

WSCC consists of two components: structure and process. The WSCC structure outlines ten components schools must address to tend to student’s holistic health needs: health education; physical education and activity; health services; nutrition services; counseling, psychological & social services; physical environment; social & emotional climate; employee wellness; and family and community involvement. The WSCC process is designed to purposefully integrate the efforts and resources of education and health to provide a full set of programs without duplication or fragmentation by emphasizing needs assessment; planning based on data; sound science; analysis of gaps and redundancies and evaluation. The WSCC process model assists in the development of coordinated, comprehensive, multifaceted programming that enhances environmental supports and the capacity of the school to ensure its academic mission.

What the Research Says

Healthy Students Perform Better Academically

- Increased scores on standardized tests
- Increased graduation rates
- Increased alertness & concentration
- Increased energy levels
- Improved self-esteem
- Improved mood levels
- Improved test scores
- Less absenteeism
- Reduced drop-out rates
- Reduction in disruptive behaviors
- Decrease in suspensions & detentions
- Reduction in expulsions from school
- Decrease in teen pregnancy rates
- Decrease in juvenile crime arrests

What Contributes to Students Dropping Out?

- Substance abuse
- Poor reading and math skills
- Pregnancy and parenting
- Psychological and emotional problems
- Age-related promotion
- Frequent suspensions
- Lack of engagement due to poor instruction, unwelcoming environment

Source: www.cdc.gov/HealthyYouth

Fact Sheet: 13 of 13
HEALTH IS A PRIORITY FOR EDUCATIONAL SUCCESS

It is clearly recognized that poor health interferes with learning — it increases absenteeism and reduces the ability to concentrate in the classroom.

At the same time, it is also recognized that education is the best predictor of good health and longevity.

Therefore, it is clear that schools that value and promote education need to attend to the health promotion of their students. Research supports this conclusion.

- Schools with higher percentages of students who did not routinely engage in healthy eating and physical activity showed smaller subsequent gains in test scores than schools with a higher percentage of students who were physically active and engaged in healthy eating.

- Schools with higher percentages of students who reported alcohol use and the use of other drugs exhibited smaller gains in test scores than other schools. This conclusion was noted in both high performing and low performing schools.

- Schools that reported higher levels of theft and vandalism and lower proportions of students who felt safe at school showed smaller gains in test scores than other schools and higher drop out rates.

- Schools whose students reported their school environment reflected a caring attitude, high academic expectations, and an opportunity to be involved in meaningful activities showed greater gains in test scores than other schools and reduced dropout rates.

COORDINATION IS THE KEY

- Curriculum coordination highlighting health topics in all subject areas contributes to the effectiveness of health education.

- School policies that support and reflect the principles taught in classes increases the effectiveness of the instructional programs.

- Coordinating school health promotion activities with community health promotion activities increases their effectiveness.

- Expanding the role of the school nurse and coordinating health service activities and mental health and social services with the academic programs of the school increases the success of each.

WHAT CAN WE DO?

- Encourage schools to focus on the needs of the whole child by adopting a coordinated school health approach.

- Encourage schools to adopt NDE’s Coordinated School Health Policy.

- Encourage schools to form school health advisory councils and teams.

- Encourage schools to utilize the School Health Index to assess the health practices and health barriers in their schools.

Acknowledgements

Numerous individuals and organizations collaborated to make this project a success. We would like to thank the following individuals for substantial support and contribution to the project.

- Jeff Armitage, Epidemiology Surveillance Coordinator, Nebraska Department of Health and Human Services, Division of Public Health.
- Debora Barnes-Josiah, Nebraska Child Death Review Team Coordinator, Nebraska Department of Health and Human Services.
- Jessie Coffey, Nebraska School Health Grant Coordinator, Nebraska Department of Education.
- Sharon Davis, Team Nutrition Coordinator, Schools, Nebraska Department of Education.
- Marci Athey-Graham, Infectious Disease Prevention and Care, Department of Health and Human Services.
- Lindsey Hanlon, Behavioral Health Services Manager, Nebraska Department of Health and Human Services, Division of Public Health.
- Dennis Leschinsky, Epidemiology Surveillance Coordinator, Nebraska Department of Health and Human Services.
- Michaela Jennings, Adolescent Health Program Manager, Nebraska Department of Health and Human Services, Adolescent Health Program.
- Chris Junker, HIV/Sexual Health Education Specialist, Nebraska Department of Education.
- Amanda Mortensen, Program Manager, Tobacco Free Nebraska.
- Jolene Palmer, School Safety/Security Director, Nebraska Department of Education.
- Lacey Batt-Peters, Physical Education and Health Education Specialist, Nebraska Department of Education.
- Andre Riley, Nebraska State School Nurse Consultant, Nebraska Department of Health and Human Services, School Health Program.
- Peg Ogea-Ginsburg, Injury Prevention Program Manager, Nebraska Department of Health and Human Services, Division of Behavioral Health.
- Zainab Rida, Equity Officer & Administrator, Office of Coordinated Student Support Services.

A special thanks goes to The Buffalo Beach Company, for the initial project concept and design and to Veronica Schermerhorn for updating the report.
The 2018-2019 Nebraska Adolescents...Keeping Them Healthy was developed by the Nebraska Department of Education.
