

Harvest of the Month

APPLES

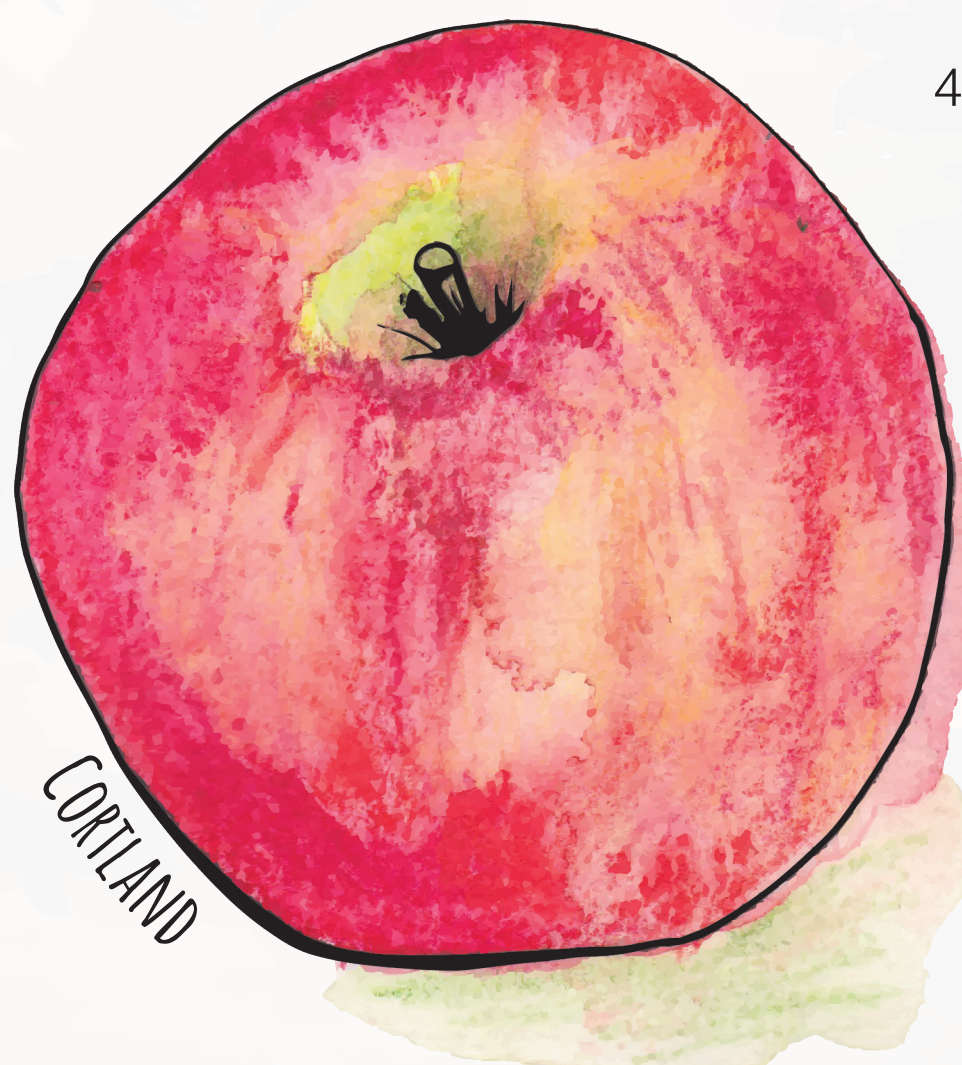

HISTORICAL TIDBIT -

There are over 7,000 types of apples across the world! Apples originate from a region in central asia near the Tien Shan Mountain range which comprises parts of China, Kazakhstan, Kyrgyzstan, and Tajikistan.

DID YOU KNOW -

Apple trees need from 500 - 1,000 hours of temperatures between 32 - 45 degrees to develop blossoms and fruit. This is one reason apple trees grow well in Nebraska - they get the cold they need in the winter!
