MISSION

The Nebraska Game and Parks Commission's Fish & Wildlife Education Division works to increase ecological literacy by providing Nebraskans of all ages with diverse statewide science-based programming, curriculum, resources, and opportunities, in the pursuit of increasing our constituent's appreciation and understanding of our state's natural resources and inspire their participation in the conservation of these incredible resources.

EXAMPLES OF PROJECTS

We offer workshops and professional development opportunities that provide tools and resources for after school educators and program leaders to incorporate nature and science in their afterschool programs. We also offer resources such as nature trunks, kits, and family nature night trailers that program leaders can check out and use to increase their nature based programming.
