March 13: Root Causes of Trauma

April 10: Vaping/Tobacco

May 8: Topic TBD

Children's Hospital & Medical Center is excited to be the host of the School Health Learning Collaborative for our Nebraska school partners. This is an opportunity for school nurses and other school staff to learn and interact with Children's experts and other health industry leaders during the 2023/2024 school year.

Benefits include access to current information, practices, and resources on a variety of physical and behavioral health topics; networking with other school nurses and Children's experts in a community of practice; shared problem-solving on school-level challenges experienced by school nurses as issues are identified; educational resources for school staff, students, and families such as posters, social media messages, videos and handouts; and ongoing communication with the Children's School Health team.

This learning collaborative is brought to you at no cost by Children's Hospital & Medical Center and planned collaboratively with education administrators, school nurses, pediatric infectious disease providers, pediatric hospitalists, and general pediatricians.

Schedule and presenters may be modified. Scan the QR code for the most up-to-date School Health Learning Collaborative training calendar, resources, and registration information. CNE credits available.

For more information, contact Kim McClintick, School Health Coordinator, at kmclintick@childrensomaha.org.
